

1 HL7 Message

The message consists of 13 segments:

1. Message Header (MSH): Here we define the receiving and sending appli-

The very first lines of code have the task of importing the message in the MA-

```
11     fields(i,1:length(temp))=temp;  
12 end  
13  
14 end
```

Code 2: Message formatting

```
5 if strcmp
```
